ANS KHAN

Backend-first Full Stack Developer - Laravel / PHP

Lahore, Pakistan • +92-305-1852884 • anskhanz97@gmail.com • linkedin.com/in/anskhano • github.com/anskhanz97

SUMMARY

Backend-first full-stack developer who designs APIs, integrates platforms, and stabilises business-critical workflows across multiple product lines. Strongest in Laravel and PHP backend engineering, with practical delivery in Vue, React, TypeScript, and Blade.

Experienced with multi-tenant systems, two-way and three-way synchronization, Third-Party APIs, queue-driven processing, concurrency control, and the boundaries between cloud services, desktop clients, Point of Sale systems, and external platforms.

WORK EXPERIENCE

Cloud & Infrastructure Technical Support Intern - Systems Limited **October 2022 - February 2023**

- Configured Microsoft AX 2012 and Microsoft Dynamics 365 environments and gained practical exposure to Microsoft Azure and Power Platform.
- Investigated Microsoft product issues and supported customers through Email and Microsoft Teams.

Backend Developer, PHP/Laravel - iT Life **March 2023 - August 2023**

- Built and maintained custom PHP, Laravel, and JavaScript applications with responsive cross-device experiences.
- Collaborated with cross-functional teams on releases and provided ongoing maintenance, updates, and technical support for live client websites.

Laravel Developer - STechSole **September 2023 - February 2026**

- Built and maintained REST APIs in Laravel for Vue.js, HTML, CSS, and JavaScript clients, working directly with Product and Design.
- Delivered responsive Blade and Vue.js interfaces across multiple client applications using modular service-layer code, middleware, and migrations.
- Troubleshot, debugged, and optimised existing systems to reduce regressions and improve response times.

Full Stack Developer - XEPOS Ltd **February 2026 - Present**

- Designed and built a separate Loyalty Program from the ground up—schema, Eloquent models, migrations, Sanctum authentication, tenant isolation, contracts, and integrations—then connected it to Hospitality and Retail host platforms and their TILL / Point of Sale workflows.
- Integrated Xero into Retail and Hospitality with OAuth 2.0, queued invoice/payment/bill jobs, token refresh, Webhooks, synchronization commands, and protection against duplicate or out-of-order events.
- Built two-way and three-way synchronization across TILL, cloud, Loyalty, and accounting systems using identity mapping, phone normalization, and status-gated void/refund flows.
- Hardened money-like and Loyalty state with MySQL transactions, pessimistic locking, idempotency keys, and after-commit dispatch patterns to prevent lost updates and unsafe follow-up jobs.
- Created and configured multiple queue workers on Laravel Forge, diagnosed multi-database and multi-queue production issues, and enabled C# desktop teams through APIs that preserved shared business rules.

EDUCATION

Bachelor in Computer Science (GPA: 3.4) **Jan 2018 - Jun 2022**

Lahore, Pakistan

TECHNICAL SKILLS

Backend: PHP, Laravel 10/12, REST APIs, Eloquent, Laravel Sanctum, service layers, middleware, queues/jobs, Redis, Laravel Horizon, schedulers, observers, events, listeners

Data and reliability: MySQL, migrations, transactions, pessimistic locking, idempotency, tenant isolation, identity mapping, concurrency control, auditability, synchronization, transactional outbox patterns

Frontend: Vue 3, React, TypeScript, JavaScript, Blade, HTML, CSS, Tailwind, Vite, TanStack Query

Integrations: Xero, Stripe, WhatsApp, OAuth 2.0, Webhooks, Point of Sale / TILL contracts, API documentation, Postman

Other: MQL4/MQL5, MetaTrader Expert Advisors, modular event-driven systems, JSON persistence, Git, GitHub, Azure, Microsoft Power Platform

Certifications: Microsoft Azure Fundamentals (AZ-900); Microsoft Azure Developer Associate (AZ-204)

SELECTED PROJECTS

Rent a Car Management SaaS - Laravel 12, Vue 3, TypeScript, MySQL, Redis

- Personal multi-tenant rental-operations platform covering companies, branches, identity and scoped access, customers, drivers, fleet, availability, quotations, pricing, reservations, allocations, handover, return inspections, damage, maintenance, payments, deposits, owner settlements, reporting, and integrations.
- Architected as a modular monolith with API-first contracts, explicit domain boundaries, transactional commands, state transitions, audit/outbox records, OpenAPI documentation, Horizon queue groups, tenant isolation, evidence workflows, and a documented delivery roadmap.

Loyalty Program - Laravel, MySQL, Redis, Vue / React integrations

- Independently designed and built as a reusable platform installed into Hospitality and Retail host applications, connecting their TILL / Point of Sale workflows to members, rewards, tiers, campaigns, QR flows, exports, redemptions, balances, and integration contracts.
- Delivered the cross-platform synchronization and reliability model across the host applications, Loyalty services, background workers, Third-Party APIs, and C# desktop clients.

Human Resource Management System - Laravel, Vue.js, MySQL

- End-to-end HR platform with employee management, attendance, leave tracking, expense tracking, performance evaluation, authentication, responsive workflows, and data integrity.

All About Dairy - Online B2B Marketplace - Laravel, MySQL

- Marketplace connecting farmers, distributors, and retailers with real-time pricing, vendor management, supply-chain visibility, and secure escrow payment workflows.

Tasmiya Enterprises - Freelance Laravel / MySQL Project

- Multi-division business website and profile-management system with Laravel authentication, role-based administration, admin-controlled team profiles, modular Blade layouts, and responsive themed sections.

Independent MT5 Trading Bots & Strategy Systems - MQL4/MQL5

- Freelance systems for a limited private group of Forex / Gold traders. Built event-driven Expert Advisors for engulfing setups, Fair Value Gaps, Pin Bars, and Bollinger Bands with signal modules, order execution, lifecycle state, risk controls, deterministic identifiers, JSON persistence, visual state, and diagnostics.
- MQL4/MQL5 are C/C++-influenced languages for MetaTrader automation; the work applies backend habits such as modular boundaries, state machines, persistence, duplicate prevention, failure handling, and repeated testing to automated trading workflows.

Additional projects: Online Laundry Management System (orders, tracking, payments, staff scheduling, notifications, reporting) • Car Parking Management System (real-time slots, digital tickets, payments, and occupancy analytics)

Portfolio: **github.com/anskhanz97** | Available for backend, platform, and integration-focused roles
